<td></td>
</tr>
</tbody>
</table>
| Diphtheria, Tetanus, and acellular Pertussis (DTaP), and Haemophilus influenzae type b (Hib) | TriHIBit (sanofi pasteur) | 12 mos. through 4 yrs (prior to 5<sup>th</sup> birthday) | • Use as the final dose for the primary series.  
• Should not be used at ages 2, 4, and 6 months for the primary series. |                 |
| Diphtheria, Tetanus, and acellular Pertussis (DTaP), Hepatitis B and inactivated Polio (IPV) | Pediarix (GSK) | 6 wks through 6 yrs (prior to 7<sup>th</sup> birthday) | • 3 dose series recommended to be administered at 2, 4, and 6 months of age.  
• Recommended to be used as the first 3 doses of the primary series. Recommended to not be used for 4<sup>th</sup> dose. |                 |

**DTaP**

**Age 1-6 years:**
4 doses, with one dose given on or after the 4<sup>th</sup> birthday, OR any 5 doses.

**Age 7-9 years:**
3 doses of Td or any previously administered combination of DTP, DTaP, and DT to equal 3 doses.

**Comments**

Any child entering pre-school, and/or pre-Kindergarten needs a minimum of 4 doses and a booster dose after the 4<sup>th</sup> birthday for Kindergarten attendance requirements.

Pupils after the seventh birthday should receive adult type Td.

</tr>
<tr>
<td>Diphtheria, Tetanus, and acellular Pertussis (DTaP), inactivated Polio (IPV)</td>
<td>Kinrix (GSK)</td>
<td>4 through 6 yrs (prior to 7th birthday)</td>
<td>A single dose to be used as the fifth dose in the diphtheria, tetanus, and acellular pertussis (DTaP) vaccine series and the fourth dose in the inactivated poliovirus vaccine (IPV) series in children 4 through 6 years of age whose previous DTaP vaccine doses have been with INFANRIX and/or PEDIARIX for the first three doses and INFANRIX for the fourth dose.</td>
</tr>
<tr>
<td>Diphtheria and Tetanus (DT)</td>
<td>DT (Aventis Pasteur)</td>
<td>6 wks through 6 yrs (prior to 7th birthday)</td>
<td>Recommended to be used as a 3 or 4 dose series separated by 4-8 wks. Those who receive all four primary doses before the fourth birthday should receive a booster dose. This booster dose is not necessary if the fourth dose in the primary series was given after the fourth birthday.</td>
</tr>
</tbody>
</table>

Please note: There is no acceptable titer test for pertussis.

DTaP

**Age 1-6 years:**
4 doses, with one dose given on or after the 4th birthday, OR any 5 doses.

**Age 7-9 years:**
3 doses of Td or any previously administered combination of DTP, DTaP, and DT to equal 3 doses.

**Comments**
Any child entering pre-school, and/or pre-Kindergarten needs a minimum of 4 doses and a booster dose after the 4th birthday for Kindergarten attendance requirements.

Pupils after the seventh birthday should receive adult type Td.

Please note: There is no acceptable titer test for pertussis.

</thead>
</table>
| Tetanus diphtheria           | DECAVAC (Aventis Pasteur) OR Td (Generic) (Mass Biologics) | ≥ 7 yrs   | • May be used as a 3 dose primary series for those 7 years of age and older.  
• May be used to complete the primary series for those who only received 1 or 2 doses of any combination of DTaP. |
| Tetanus diphtheria, acellular Pertussis (Tdap) | Boostrix (GSK) | ≥ 10 years | • One time booster dose.  
ACIP has expanded recommendations for the use of Tdap. Please see the CDC 2011 Recommended Immunization Schedule for Persons Aged 7 Through 18 Years. For further guidance, please visit:  
http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6001a4.htm? s_cid=mm6001a4_w |
| Tetanus diphtheria, acellular Pertussis (Tdap) | Adacel (sanofi pasteur) | 11 through 64 yrs | • One time booster dose.  
ACIP has expanded recommendations for the use of Tdap. Please see the CDC 2011 Recommended Immunization Schedule for Persons Aged 7 Through 18 Years. For further guidance, please visit:  
http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6001a4.htm? s_cid=mm6001a4_w |

**Td**

**Age 7-9 years:** 3 doses of Td or any previously administered combination of DTP, DTaP, and DT to equal 3 doses.

**Comments**
Pupils after the seventh birthday should receive adult type Td.

**Tdap**

**Grade 6**
Entering Grade 6 (or comparable age level for Special Ed programs): 1 dose.

**Comments**
For pupils entering Grade 6 on or after 9-1-08 and born on or after 1-1-97.

A child is not required to have a Tdap dose until FIVE years after the last DTP/DTaP or Td dose.

• Alternatively, a 4-dose schedule, given on days 0, 7 and 21 to 30 followed by a booster dose at month 12 may be used. | Hepatitis A/Hepatitis B                                                                                                                                                                              |
| Hepatitis B                                  | Engerix-B (GSK)       | ≥ 0 mos                | • 3 doses with the first dose administered on elected date; second dose: 1 month later; third dose: 6 months after first dose.            | There is no Hepatitis A vaccine requirement for school entry in NJ.                                                                                                                                  |

**Comments**

- **HIB**
  - Age 2-11 Months: 2 doses
  - Age 12-59 Months: 1 dose

Minimum of 2 doses of Hib-containing vaccine is needed if between the ages of 2-11 months.

Minimum of 1 dose of Hib-containing vaccine is needed after the first birthday.

Please refer to NJ requirements for Hepatitis B vaccines.
<table>
<thead>
<tr>
<th>Vaccine Type</th>
<th>Vaccine Name</th>
<th>Age</th>
<th>Dose and Schedule</th>
</tr>
</thead>
</table>
| Hepatitis B  | Recombivax-HB (Merck) Available as Pediatric and Adult Formulations | ≥ 0 mos | - 3 doses with the first dose: on elected date; second dose: 1 month later; third dose: 6 months after first dose.  
- An alternate two-dose series recommended to be administered to adolescents (11 through 15 years of age) with the first dose given on elected date and second dose: 4-6 months later. |
| Hepatitis B and Haemophilus influenzae type b (Hib) | Comvax (Merck) | 6 wks through 14 mos (prior to 15 months) | - 3 dose series recommended to be administered at 2, 4, and 12 through 15 months of age. |
| Human Papillomavirus (HPV) | Gardasil (Merck) | 9 through 26 yrs | - 3 dose series recommended to be administered in females with the first dose given on elected date; second dose 1-2 months later, and the last dose 6 months after the first dose.  
- May be given in a 3 dose series to males ages 9-26 years to reduce their likelihood of acquiring genital warts. |
| Human Papillomavirus (HPV) | Cervarix (GSK) | 9 through 25 yrs | - 3 dose series recommended to be administered in females with the first dose given on elected date; second dose 1-2 months later, and the last dose 6 months after the first dose.  
*Note: Not approved for use in males.* |
| Influenza (flu) | Various | ≥ 6 mos | - Recommended seasonally for individuals 6 months of age and older. |

**Comments**

- If a child is between 11-15 years of age and has not received 3 prior doses of Hepatitis B then the child is eligible to receive 2-dose Hepatitis B adolescent formulation.

**Hepatitis B/Hib**

Please refer to NJ requirements for Hepatitis B and Hib vaccines.

**HPV**

There is no HPV vaccine requirement for school entry in NJ.

**Influenza**

Ages 6-59 Months: 1 dose annually.
- All children younger than 9 years receiving seasonal influenza vaccine for the first time should receive two doses separated by at least 4 weeks.
- Children younger than 9 years who did not receive at least 1 dose of the 2010-2011 seasonal influenza vaccine should receive 2 doses, separated by at least 4 weeks, regardless of their previous influenza vaccination history.
- Children younger than 9 years whose vaccination history is unknown should receive 2 doses separated by at least 4 weeks.
- Children younger than 9 years who received 1 dose of seasonal influenza vaccine during the 2010-2011 season require only 1 dose this season.

<table>
<thead>
<tr>
<th>Measles, Mumps, Rubella (live) (MMR)</th>
<th>M-M-R II (Merck)</th>
<th>≥ 12 mos</th>
<th>Two dose schedule recommended to be administered with the 1st dose at 12-15 months and the 2nd dose at age 4 through 6 years.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
<td></td>
<td>Note: The 2nd dose may be given before age 4, provided at least 28 days have elapsed since the first dose was given.</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
<td>Adults are recommended to receive 2 doses if previously not vaccinated. The minimum interval between the two doses is 28 days.</td>
</tr>
</tbody>
</table>

**MMR**

2 doses of a live measles-containing vaccine, and 1 dose each of live mumps and rubella-containing vaccine on or after the first birthday.

**Comments**

Any child over 15 months of age entering child care, pre-school, or pre-Kindergarten needs a minimum of 1 dose of measles, mumps, and rubella vaccine.

Kindergarten entry requires 2 doses of measles-containing vaccine.
| Measles, Mumps, Rubella and Varicella (MMRV) | ProQuad (Merck) | 12 mos through 12 yrs (prior to 13th birthday) | - Two dose series with the 1st dose recommended to be administered at 12-15 months and the second dose for 4 through 6 years. **Note:** At least 28 days should elapse between a dose of a measles-containing vaccine such as M-M-R® II (measles, mumps, and rubella virus vaccine live) and a dose of ProQuad. At least 3 months should elapse between a dose of varicella-containing vaccine and ProQuad.  

**Note:** For the first dose at age 12-47 months, either the trivalent MMR vaccine and varicella vaccine can be given in separate injections, or the quadrivalent MMRV vaccine may be used. Clinicians considering MMRV vaccine administration should discuss the benefits and risks of both vaccination options with parents. Unless parents express a preference for MMRV vaccine, the CDC recommends that MMR vaccine and varicella vaccine should be administered for the first dose in this age group. |

**Intervals between first and second measles-containing vaccine doses recommended to not be less than 28 days.**

**Laboratory evidence of immunity is acceptable.**

**Measles, Mumps, Rubella and Varicella**

Please refer to NJ requirements for MMR and Varicella vaccines.
| Meningococcal Conjugate Vaccine (MCV4) | Menveo (Novartis) | 2 though 55 yrs | • 1 dose recommended to be administered for 2-10 years olds if high risk, otherwise routinely recommended for age 11 and older.  

ACIP recently expanded meningococcal conjugate vaccine (MCV4) recommendations in adolescents and persons at high risk. Please see the 2011 CDC immunization schedules. For further guidance, please visit:

http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6003a3.htm?s_cid=mm6003a3_e

http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6030a3.htm |
| Meningococcal Conjugate Vaccine (MCV4) | Menactra (sanofi pasteur) | 9 months through 55 yrs | • Can be administered to children 9-23 months of age if considered high risk. Given as a two dose series three months apart.  

• 1 dose recommended to be administered for 2-10 years olds if high risk, otherwise routinely recommended for age 11 and older.  

ACIP recently expanded meningococcal conjugate vaccine (MCV4) recommendations in adolescents and persons at high risk. Please see the 2011 CDC immunization schedules. For further guidance, please visit:

http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6003a3.htm?s_cid=mm6003a3_e

<th>Age</th>
<th>Doses/Intervals</th>
</tr>
</thead>
</table>
| Meningococcal Polysaccharide Vaccine (MPSV4)      | Menomune (sanofi pasteur) | ≥ 2 yrs          | • 2 doses may be recommended for children 3 months to 2 years of age under special circumstances given 3 months apart.  
  • Used for high-risk adults age 56 and older for vaccination and/or revaccination. |
| Pneumococcal 13-Valent Conjugate Vaccine (PCV-13) | Prevnar 13 (Wyeth)    | 6 wks through 5 yrs | • 4 dose series recommended to be administered at 2, 4, 6, and 12-15 months.   
  • Infants and children who began immunization with PCV7 may complete series by switching to PCV13 at any point in schedule  
  • Children who have completed infant series with PCV7 should be administered a single PCV13 dose during the second year of life  
  
  
  Note: Children who miss their shots at these ages should still get the vaccine. The number of doses and the intervals between doses will depend on the child’s age. Ask your health care provider for details. |
| Pneumococcal Polysaccharide (PPSV)                | Pneumovax 23 (Merck)  | ≥ 2 yrs          | • 1 dose recommended for all adults 65 and older. Two doses may be given to high-risk individuals.  
  • The vaccine is also recommended for anyone 2 through 64 years of age if some other risk factor is present (e.g. on the basis of medical, occupational, lifestyle, or other indications).  
  Note: Minimum age to use this vaccine is 2 years. |
| Polio (Inactivated)                              | IPOL (Sanofi Pasteur) | ≥ 6 wks          | • 4 doses series recommended to be administered at ages 2, 4, 6 to 18 months and 4 to 6 years.  
  
  Note: Routine primary poliovirus vaccination of adults (generally those 18 years of age or older) residing in the US is not recommended. |
| Pneumococcal                                     | Age 2-11 months: 2 doses  
  Age 12-59 months: 1 dose                      |                  | Comments Mandated only for children enrolled in child care, preschool, or pre-Kindergarten:  
  Minimum of 1 dose of pneumococcal conjugate vaccine is needed after the first birthday. |
| Polio                                            | Age 1-6 years: 3 doses,  
  with one dose given on or after the 4th birthday, OR  
  any 4 doses.  
  Age 7 or Older: Any 3 doses                  |                  |
<table>
<thead>
<tr>
<th>Vaccination</th>
<th>Vaccine Manufacturer</th>
<th>Minimum Age</th>
<th>Notes</th>
</tr>
</thead>
</table>
| Rotavirus Vaccine (RV) Live, Oral               | Rotarix (GSK)        | 6 through 24 wks | - 2 dose series that recommended to be administered at 2 months and 4 months.  
- Vaccination should not be initiated for infants age 15 wks 0 days and older.  |
| Rotavirus Vaccine (RV) Live, Oral, Pentavalent  | RotaTeq (Merck)      | 6 through 32 wks | - 3 dose series recommended to be administered at 2 months and 4 months.  
- Vaccination should not be initiated for infants age 15 wks 0 days and older.  
- The maximum age for the final dose in the series 8 months 0 days.  |
| Varicella (Chickenpox)                         | Varivax (Merck)      | > 12 mos     | - Two doses recommended for individuals 12 months of age and older.  
- Second dose recommended between 4-6 years of age.  |

**Comments**

Any child entering preschool, and/or pre-Kindergarten needs a minimum of 3 doses.

Kindergarten entry requires a booster dose after the fourth birthday.

Either inactivated polio vaccine (IPV) or oral polio vaccine (OPV) separately or in combination is acceptable.

Polio vaccine is not required for pupils 18 years or older.

There is no Rotavirus vaccine requirement for school entry in NJ.
<table>
<thead>
<tr>
<th>Note: Second dose recommended to be administered before age 4 years, with a minimum of a 3 month interval after the first dose.</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Adults are recommended to receive 2 doses if previously not vaccinated.</td>
</tr>
<tr>
<td>Note: Adolescents and adults 13 years of age and older should receive the first dose at elected date and a second dose 4 to 8 wks later.</td>
</tr>
</tbody>
</table>

### Comments

All children 19 months of age and older enrolled in a child care/ pre-school center or children born on or after 1-1-98 entering school for the first time in Kindergarten or Grade 1 need 1 dose of varicella vaccine.

Laboratory evidence of immunity, physician’s statement or a parental statement of previous varicella disease is acceptable.
### Recommended Immunization Schedule for Persons Aged 0 Through 6 Years

**For those who fall behind or start late, see the catch-up schedule**

### Notes
- The supplemental dose of PCV13 should be administered at least 8 weeks after the previous dose of PCV7. See *MMWR* 2010;59(No. RR-11).
- Administer PPSV at least 8 weeks after last dose of PCV to children aged 2 years or older with certain underlying medical conditions, including a cochlear implant.
- If 4 or more doses are administered prior to age 4 years an additional dose should be administered at age 4 through 6 years.
- The final dose in the series should be administered on or after the fourth birthday and at least 6 months following the previous dose.
- Healthy children aged 2 years and older (i.e., those who do not have underlying medical conditions that predispose them to influenza complications), either LAIV or TIV may be used, except LAIV should not be given to children aged 2 through 4 years who have had wheezing in the past 12 months.
- The final dose should be administered by at least 4 years to children aged 6 months through 8 years who are receiving seasonal influenza vaccine for the first time or who were vaccinated for the first time during the previous influenza season but only received 1 dose.
- Children aged 6 months through 8 years who received no doses of monovalent 2009 H1N1 vaccine should receive 2 doses of 2010–2011 seasonal influenza vaccine. See *MMWR* 2010;59(No. RR-8):33–34.
- The second dose may be administered before age 4 years, provided at least 4 weeks have elapsed since the first dose.
- Children aged 6 months through 8 years who received no doses of monovalent MCV4 vaccine may receive 2 doses of MCV4 vaccine.
- Administer 2 doses at least 8 weeks apart to children aged 2 through 4 years who have had wheezing in the past 12 months.
- The recommended minimum interval between doses is 3 months. However, if the second dose was administered at least 4 weeks after the first dose, it can be accepted as valid.
- The second dose may be administered before age 4 years, provided at least 3 months have elapsed since the first dose.
- For children aged 12 months through 12 years the recommended minimum interval between doses is 3 months. However, if the second dose was administered at least 4 weeks after the first dose, it can be accepted as valid.
- Administer 2 doses at least 6 months apart.
- Hepatitis A vaccine (HepA). (Minimum age: 12 months)
- Administer 2 doses at least 6 months apart.
- Hepatitis A vaccine (HepA). (Minimum age: 12 months)
- Administer 2 doses at least 6 months apart.
- Administer 2 doses at least 6 months apart.
- Administer 2 doses at least 6 months apart.

### Additional Information
- The schedule includes recommendations for persons aged 0 through 6 years. Any dose not administered at the recommended age should be administered at a subsequent visit, when indicated and feasible.
- Considerations should include provider assessment, patient preference, and the potential for adverse events. Providers should consult the relevant Advisory Committee on Immunization Practices statement for detailed recommendations: [http://www.cdc.gov/vaccines/recs/acip](http://www.cdc.gov/vaccines/recs/acip).
- The recommended schedule for ages 1 through 18 years is approved by the Advisory Committee on Immunization Practices (ACIP), the American Academy of Pediatrics (AAP), and the American Academy of Family Physicians (AAFP).
### Recommended Immunization Schedule for Persons Aged 7 Through 18 Years—United States • 2011

#### 1. Tetanus and diphtheria toxoids and acellular pertussis vaccine (Tdap).
- Minimum age: 10 years for Boostrix and 11 years for Adacel.
- Persons aged 7 through 10 years who are not fully vaccinated against pertussis (including those never vaccinated or with unknown pertussis vaccination status) should receive a single dose of Tdap. Refer to the catch-up schedule if additional doses of tetanus and diphtheria toxoid-containing vaccine are needed.
- Tdap can be administered regardless of the interval since the last tetanus and diphtheria toxoid–containing vaccine.

#### 2. Human papillomavirus vaccine (HPV). (Minimum age: 9 years)
- Quadrivalent HPV vaccine (HPV4) or bivalent HPV vaccine (HPV2) is recommended for prevention of cervical precancers and cancers in females.
- HPV4 is recommended for prevention of cervical precancers, cancers, and genital warts in females.
- HPV4 may be administered in a 3-dose series to males aged 9 through 18 years to reduce their likelihood of genital warts.
- Administer the second dose 1 to 2 months after the first dose and the third dose 6 months after the first dose (at least 24 weeks after the first dose).

#### 3. Meningococcal conjugate vaccine, quadrivalent (MCV4). (Minimum age: 2 years)
- Administer MCV4 at age 11 through 12 years with a booster dose at age 16 years.
- Administer 1 dose at age 13 through 16 years if not previously vaccinated.
- Persons who received their first dose at age 13 through 15 years should receive a booster dose at age 16 through 18 years.
- Administer 1 dose to previously unvaccinated college freshmen living in a dormitory.
- Administer 2 doses at least 8 weeks apart to children aged 2 through 10 years with persistent complement component deficiency and anatomic or functional asplenia, and 1 dose every 5 years thereafter.
- Persons with HIV infection who are vaccinated with MCV4 should receive 2 doses of non-ovomultivalent 2009 H1N1 vaccine should receive 2 doses of 2010-2011 seasonal influenza vaccine. See MMWR 2010;59(No. RR-8):33–34.

#### 4. Influenza vaccine (seasonal).
- For healthy nonpregnant persons aged 7 through 18 years (i.e., those who do not have underlying medical conditions that predispose them to influenza complications), either LAIV or TIV may be used.
- Administer 2 doses (separated by at least 4 weeks) to children aged 6 months through 8 years who are receiving seasonal influenza vaccine for the first time or who were vaccinated for the first time during the previous influenza season but only received 1 dose.
- Children 6 months through 8 years of age who received no doses of monovalent 2009 H1N1 vaccine should receive 2 doses of 2010-2011 seasonal influenza vaccine. See MMWR 2010;59(No. RR-8):33–34.

#### 5. Pneumococcal vaccines.
- A single dose of 13-valent pneumococcal conjugate vaccine (PCV13) may be administered to children aged 6 through 18 years who have functional or anatomic asplenia, HIV infection or other immunocompromising condition, cochlear implant or CSF leak. See MMWR 2010;59(No. RR-11).
- The dose of PCV13 should be administered at least 8 weeks after the previous dose of PCV7.
- Administer pneumococcal polysaccharide vaccine at least 8 weeks after the last dose of PCV to children aged 2 years or older with certain underlying medical conditions, including a cochlear implant. A single revaccination should be administered after 5 years to children with functional or anatomic asplenia or an immunocompromising condition.

#### 6. Hepatitis A vaccine (HepA).
- Administer 2 doses at least 6 months apart.
- HepA is recommended for children aged older than 23 months who live in areas where vaccination programs target older children, or who are at increased risk for infection, or for whom immunity against hepatitis A is desired.

#### 7. Hepatitis B vaccine (HepB).
- Administer the 3-dose series to those not previously vaccinated. For those with incomplete vaccination, follow the catch-up schedule.
- A 2-dose series (separated by at least 4 months) of adult formulation Recombivax HB is licensed for children aged 11 through 15 years.

#### 8. Inactivated poliovirus vaccine (IPV).
- The final dose in the series should be administered on or after the fourth birthday and at least 6 months following the previous dose.
- If both OPV and IPV were administered as part of a series, a total of 4 doses should be administered, regardless of the child’s current age.

- The minimum interval between the 2 doses of MMR is 4 weeks.

#### 10. Varicella vaccine.
- For persons aged 7 through 18 years without evidence of immunity (see MMWR 2007;56[No. RR-4]), administer 2 doses if not previously vaccinated or the second dose if only 1 dose has been administered.
- For persons aged 7 through 12 years, the recommended minimum interval between doses is 3 months. However, if the second dose was administered at least 4 weeks after the first dose, it can be accepted as valid.
- For persons aged 13 years and older, the minimum interval between doses is 4 weeks.

---

The Recommended Immunization Schedules for Persons Aged 0 Through 18 Years are approved by the Advisory Committee on Immunization Practices (http://www.cdc.gov/vaccines/recs/acip), the American Academy of Pediatrics (http://www.aap.org), and the American Academy of Family Physicians (http://www.aafp.org).

</tbody>
</table>

1. **Hepatitis B vaccine (HepB).**
   - Administer the 3-dose series to those not previously vaccinated.
   - The minimum age for the third dose of HepB is 24 weeks.
   - A 2-dose series (separated by at least 4 months) of adult formulation Recombivax HB is licensed for children aged 11 through 15 years.

2. **Rotavirus vaccine (RV).**
   - The maximum age for the first dose is 14 weeks 6 days. Vaccination should not be initiated for infants aged 15 weeks 0 days or older.
   - The maximum age for the final dose in the series is 8 months 0 days.
   - If Rotarix was administered for the first and second doses, a third dose is not indicated.

3. **Diphtheria and tetanus toxoids and acellular pertussis vaccine (DTaP).**
   - The fifth dose is not necessary if the fourth dose was administered at age 4 years or older.

4. **Haemophilus influenzae type b conjugate vaccine (Hib).**
   - 1 dose of Hib vaccine should be considered for unvaccinated persons aged 5 years or older who have sickle cell disease, leukemia, or HIV infection, or who have had a splenectomy.
   - If the first 2 doses were FRP-OMP (Pedvax-HB or Comvax), and administered at age 11 months or younger, the third (and final) dose should be administered at age 12 through 15 months and at least 8 weeks after the second dose.
   - If the first dose was administered at age 7 through 11 months, administer the second dose at least 4 weeks later and a final dose at age 12 through 15 months.

5. **Pneumococcal vaccine.**
   - Administer 1 dose of 13-valent pneumococcal conjugate vaccine (PCV13) to all healthy children aged 24 through 59 months with any incomplete PCV schedule (PCV7 or PCV13).
   - For children aged 24 through 71 months with underlying medical conditions, administer 1 dose of PCV13 if 3 doses of PCV were received previously or administer 2 doses of PCV13 at least 8 weeks apart if fewer than 3 doses of PCV were received previously.
   - A single dose of PCV13 is recommended for certain children with underlying medical conditions through 18 years of age. See age-specific schedules for details.
   - Administer pneumococcal polysaccharide vaccine (PPSV) to children aged 2 years or older with certain underlying medical conditions, including a cochlear implant, at least 8 weeks after the last dose of PCV. A single revaccination should be administered after 5 years to children with functional or anatomic asplenia or an immunocompromising condition. See MMWR 2010;59(No. RR-11).

6. **Inactivated poliovirus vaccine (IPV).**
   - The final dose in the series should be administered on or after the fourth birthday and at least 6 months following the previous dose.
   - A fourth dose is not necessary if the third dose was administered at age 4 years or older and at least 6 months following the previous dose.
   - In the first 6 months of life, minimum and minimum intervals are only recommended if the person is at risk for imminent exposure to circulating poliovirus (i.e., travel to a polio-endemic region or during an outbreak).

7. **Measles, mumps, and rubella vaccine (MMR).**
   - Administer the second dose routinely at age 4 through 6 years. The minimum interval between the 2 doses of MMR is 4 weeks.

8. **Varicella vaccine.**
   - Administer the second dose routinely at age 4 through 6 years.
   - If the second dose was administered at least 4 weeks after the first dose, it can be accepted as valid.

9. **Hepatitis A vaccine (HepA).**
   - HepA is recommended for children aged older than age 23 months who live in areas where vaccination programs target older children, or who are at increased risk for infection, or for whom immunity against Hepatitis A is desired.

10. **Tetanus and diphtheria toxoids (Td) and tetanus and diphtheria toxoids and acellular pertussis vaccine (Tdap).**
    - Doses of TdA are counted as part of the Td/Tdap series.
    - Tdap should be substituted for a single dose of Td in the catch-up series for children aged 7 through 10 years or as a booster for children aged 11 through 18 years; Td for other doses.

11. **Human papillomavirus vaccine (HPV).**
    - Administer the series to females at age 13 through 18 years if not previously vaccinated or have not completed the vaccine series.
    - Quadrivalent HPV vaccine (HPV4) may be administered in a 3-dose series to males aged 9 through 18 years to reduce their likelihood of genital warts.
    - Use recommended routine dosing intervals for series catch-up (i.e., the second and third doses should be administered at 1 to 2 and 6 months after the first dose). The minimum interval between the first and second doses is 4 weeks. The minimum interval between the second and third doses is 12 weeks, and the third dose should be administered at least 24 weeks after the first dose.
